FOOD FACT

Fiber, explained

What it is, the two types, and how to read it on a label

SOLUBLE FIBER

Dissolves in water to form a gel-like substance. Bacteria break it down in the large intestine.

INSOLUBLE FIBER

Does not dissolve in water and may pass through the digestive tract relatively intact.

28 g

Daily Value for fiber, based on 2,000 calories

5% | 20%

5% DV or less is low. 20% DV or more is high.

WORKED EXAMPLE

A serving with 7 g of fiber is 25% of the Daily Value (7 ÷ 28), so it is a HIGH source.

> **Fiber is a carbohydrate the small intestine cannot easily digest. Use %DV to compare foods per serving.**
